

Social post buffer — 4 weeks of ready-to-ship posts

Eight fully drafted posts. Two per week × four weeks = one month of rhythm. Pick the order that suits the photos you have on the day. Don't over-schedule; the point is to remove the "what do I post" friction, not lock you into a calendar.

Caption length is tuned for Instagram (the harder constraint); all of these work for Facebook unchanged. Hashtags are listed separately so you can omit on Facebook.

Cross-posting note: If your Instagram and Facebook are linked (Meta Business Suite), turn on "share to Facebook" when posting on IG. That mirrors automatically and you only think about it once. Don't manually re-author on Facebook — duplicate effort.

Post 1 — "The page that worked this week" (pillar: book in action)

Image direction: A photo of the book open to a single page, with a kid's pencil marks on it. Real, messy, not staged. If you have a recent photo of one of your kids' pages — that. Otherwise: open the book to page 12 or 19 (high-engagement pages from the early draft feedback), grab a pencil, do a quick honest mark-up yourself.

Caption:

Whatever page they fold down is the page that worked.

Page 19 is winning this week — number puzzles, the bit where Lindy gets one wrong.

The whole book is here if you want it for yours: mazmatics.com

Post 2 — "What 'home maths' actually looks like" (pillar: parent-helpful)

Image direction: Carousel of 2 images (IG supports up to 10; 2 is enough). Image 1: book on the kitchen table with crayons / coffee / a half-eaten breakfast in shot. Real-life clutter encouraged. Image 2: same scene 20 minutes later — kid leaning in, drawing. Caption talks to the contrast.

Caption:

What "home maths" looks like at our place.

No worksheets. No "let's do maths now." Just the book on the table next to whatever

The trick is: you don't ask. You just leave it. Curiosity beats compliance every time.
mazmatics.com — free sample if you want to try the same trick.

Post 3 — "Maths joke #1" (pillar: maths-joy)

Image direction: Pure typography. Black or warm-paper background, big yellow display text. If you can mock it up in Canva or shoot a hand-lettered version on the back of a notebook page, even better. The joke is the post.

Caption:

Why was 6 afraid of 7?

I told my kid this. She didn't laugh. So I drew it. Then I drew thirty more. That's why.

Post 4 — "Behind the scenes: a page you cut" (pillar: behind the scenes)

Image direction: A photo or scan of an actual page that didn't make Vol. 1 — a rough sketch, a half-finished spread, anything from the cutting-room floor. If nothing photographable exists, a photo of your sketchbook with the discarded idea. Authenticity > polish here.

Caption:

This page didn't make Vol. 1.

The joke worked. The page didn't — too much going on, the eye couldn't land anywhere. Vol. 2 is in the works. I'll show more of the cuts as I go.

Post 5 — "Number-of-the-week: 27" (pillar: maths-joy)

Image direction: Black or warm-paper background with a giant "27" in display type. Below it (smaller): three quick weird facts. Or hand-letter it on a piece of paper and shoot it. Or: a photo of "27" written on something in your house (clock at 27 past, kitchen timer, page 27 of the book...).

Caption:

Number of the week: 27

- It's the only number that is the sum of the digits of its cube ($27^3 = 19,683 \rightarrow 1+9+6+8+3 = 27$)
- It's a self-locating number in pi (the digits "27" appear at position 27 in pi)
- It's the number of bones in a human hand. Worth knowing while your kid is drawing.

mazmatics.com — for kids who like the weird stuff.

Post 6 — "A kid said this" (pillar: maths-joy / parent-helpful)

Image direction: A photo of the kid in question drawing or reading — back-of-head or side-on if you'd rather not show faces. Or just a still life: the open book and a sentence on a piece of paper. If you've got a real quote from your own kid, use it; if not, the line below is one many parents will recognize.

Caption:

She said: "Maths is just patterns having a conversation."

She's nine. I wasn't ready.

This is what the book is trying to do — get the brain to that frame before school.

Post 7 — "Pencil-grip, 3 months apart" (pillar: parent-helpful)

Image direction: A photo of a pencil grip — either your kid's now, or a side-by-side if you have an old photo. If you don't have the old shot, just shoot the current grip and reference the change in caption. Hands only; no face needed.

Caption:

Three months apart.

The change isn't from drilling. It's from picking up the pencil voluntarily, because

If your kid is the "I'll do it later" kind, Mazmatics might be the thing that gets them started.

Post 8 — "If Mazmatics worked for your kid..." (pillar: review push — use sparingly)

Image direction: A real review screenshot from Amazon (if you have one). Otherwise: just the book on a desk with a single Post-it that says "thank you." Or a parent-handwritten note if one exists.

Caption:

A parent emailed me last week to say their seven-year-old kept asking for the book. If Mazmatics has clicked for your kid too, the single biggest thing you can do for them is to write a review. The locale-matched review link is here:

mazmatics.com/write-a-review

Thanks for being early. The book doesn't exist without you.

Hashtags (IG):

#mazmatics #amazonreviews #kidsbooks #funmathforkids #indieauthor

When to use this one: every 5–6 posts, not more often. Review-ask posts get diminishing returns if they show up too frequently. Once a month is right.

Posting cadence reminder (from playbook.md)

- **2 posts per week is the sustainable target.**
 - **Best times (NZ):** Tuesday or Thursday, 7–9pm NZT.
 - **First-hour reply discipline:** reply to every comment within 60 minutes. Single biggest algorithmic lever.
 - **Don't cross-post manually.** Use Meta's auto-share from IG → FB.
-

How to use this buffer

1. Pick whichever post the photo you have on the day matches. Don't post in numerical order if the matching photo isn't ready.
 2. Tweak the caption to feel like *you* — never paste verbatim if a word reads off. The drafts are 90%-there; the last 10% is your voice.
 3. Strike through (or delete) each post in this file after you ship it, with the date. That way the file is also a log.
 4. When the buffer's depleted, I can spin up the next 8. Just say "more posts."
-

What I (Claude) can also do for you

- **Draft posts for a specific upcoming event** — e.g. school holidays start, end of term, back-to-school. Just give me the date and angle.
- **Mock up the typography-only posts (#3, #5)** as actual `.png` files if you want to skip the Canva step. Tell me the design constraints and I'll generate them.
- **Audit a draft post you've written yourself** — paste copy + image link, I'll give a 30-second gut check.
- **Write the long-form story post seed** mentioned in `founder-actions.md` — a 600-word "why I made Mazmatics" piece you can edit + ship as a Substack or `/blog` page.
